

## Ergonomic Screen Support and Viewing for Network Operations Center

**This Network Operations Center for a Boston based investment management firm required a series of workstations, each accommodating four 18” flat screen monitors. In addition, line-of-sight into the adjacent technology rack room, needed to be maintained, limiting the height of the furniture to 48”.**

**Technical Access developed an enclosure that incorporates a unique system of independently height-adjustable flat screen supports to provide precise positioning for the monitors; detailed ergonomic analysis of the design insured full visibility of the monitors for the system managers.**

**Unobstructed viewing of the screens is facilitated with an oversized anti-glare optical glass window; gas cylinder lifts proved easy, cushioned movement of the window for access to monitor adjustments. Recessed base cabinets under the cantilevered worksurface house towers and other technology.**
