

Beveled-edge glass, a specially textured and curved stainless steel façade, and lacquered end sections are the elements that contribute to this strikingly functional design.

The focal point of an interior space is frequently a statement of function and bold aesthetics. Sometimes it demands a unique combination of form and materials. Whether it is a reception desk or this Mancini-Duffy design for an employee lounge bar, we execute the designer's vision quickly and with precise attention to detail.

Datamation brings a design perspective and superb craftsmanship to the critical fabrication details in materials ranging from stainless steel, aluminum, glass and wood veneers to granite and other solid core surfaces. And where computers, security systems or cable management paths are required, our experience in building technology intensive workstations insures the seamless integration of communications infrastructure and design.
