

Detail of the height adjustable work surfaces and slide-out supplemental keyboard shelf.

System specialists, who frequently interchange seat locations, can secure work surface angle and height over a 12" range with a paddle operated release.

Design proposal drawing indicated work surface adjustability, secure monitor enclosure, and base cabinet tower storage.

Ergonomic Solutions for Technology Management

Flexibility and *accessibility* are essential requirements for technology management furniture that must support a range of monitor, tower and keyboard configurations. For operational staff, *ergonomic* considerations are critical in avoiding stress and musculoskeletal disorders.

This Network Security Operations center for a large financial firm is shared by system specialists who frequently interchange positions. TAF's ergonomic analysis indicated the need for work surface adjustability to accommodate the staff's physical diversity.

The TAF solution incorporated a work surface with simple, paddle activated, height and angle adjustability. Our FlexSpace design also provides the security of lockable smoked Plexiglas doors, supplemental slide-out keyboard shelves located under the enclosed monitors and base cabinets for storing towers and CPUs.
